Press Release

VCDS® Earns Highest Score in German Scan Tool Comparison Test

Lansdale, PA, April 3, 2009:

Every three years the German Motor Vehicle Supervisory Association DEKRA (www.dekra.de) does a comprehensive scan tool comparison test. The results of the 2009 test were just published in a German magazine called "KFZ-Betrieb" (www.kfz-betrieb.de). Ross-Tech's VAG-COM Diagnostic System was awarded 316 out of a possible 320 points -- the highest score of any tool in the test.

"In an independent test against 9 other scan tools from well known suppliers such as Bosch, Gutmann, and Texa, VCDS scored higher than any other tool," says Uwe Ross, founder of Ross-Tech LLC. "Nine years ago, we set out to make the best scan tool available for VW/Audi and to sell it at a price that makes it a no-brainer for everyone who works on these cars, not just shops who specialize in them. I think the fact that we won this test in VW's home market against all our big-name competition proves that we've succeeded."
